

Week 5 Report

Michael Meding

March 30, 2015

Last week we begun our Java rework of the baseline Python code. This baseline was finished late this week and is giving us results equal to that of the original Python code.

This week I have spent some time really becoming acquainted with Artificial Neural Networks in Java as I did not fully understand how to implement one. I learn best from example and thus watched a set of lectures from Stephen Welch. He does an excellent job of explaining ANNs from the ground up in a way that almost anyone could understand.
