Dear Natan,

I am writing you because Tulip was recently brought to my attention by one of my professors Fred Martin. As he may have mentioned to you one of my primary focuses while getting my masters degree has been 3D printing and as I am due to graduate in the spring I am actively seeking a full time position. I believe I would be a good fit for Tulip as my research and personal experience in full stack web development would fit with the design flow at Tulip. Working for a small startup for the past few years has also made me no stranger to fast iterations and having to wear many hats while working.

My current research is building a 3D print slicer which integrates with an IoT enabled 3D printer to allow for seamless and wireless 3D printing. As I am aware this is similar in spirit to the design of your manufacturing software which is also an IoT enabled platform. If you are interested, links to all of my research and personal projects can be found at my website www.mikemeding.com

I look forward to hearing from you.

Best,

Michael Meding
