WHY ANGULARJS IS THE FUTURE OF WEB DESIGN

MICHAEL MEDING

CONTENTS

ABSTRACT

The internet as we commonly know it has gone through many changes since its popularization in the late 80's to early 90's. In the time since its inception few things have radically changed the way we think about the web like JavaScript. It has opened up the web to a much broader audience and further "democratized" the web. Since the invention of JavaScript many libraries have been written to further aid the simplicity of its use in the browser. AngularJS is one such library however, it may represent a major turning point in web design as we know it with the introduction of web based frameworks. This paper serves to explore and explain what a web framework is and why it will revolutionize the web as we know it.

1   BACKGROUND

JavaScript was invented in 1995 by Brendan Eich and it allowed the web to suddenly go from lifeless static pages to in depth dynamic content. [1] [2] [3]
